<https://linkedin.com/in/adenugroho> | <https://ade-nugroho.vercel.app>

Information Technology undergraduate specializing in Front-End Engineering. Focused on building responsive, high-quality user interfaces using React.js, Next.js, and TypeScript. Experienced in translating complex UI/UX designs into production-ready code, integrating RESTful APIs, and maintaining clean, modular component structures. Eager to contribute to impactful, client-facing systems and collaborate effectively across design and backend teams.

Education

Universitas Brawijaya	Malang, East Java
Information Technology (S1) - GPA: 3.87 / 4.00	2023 - Present
Relevant Courses: Advanced Web Development, Mobile Application Development, Algorithms & Data Structures, System Integration (API), AI & Machine Learning.	

Work Experience

Suitmedia Kreasi Indonesia	South Jakarta, Jakarta
Front-End Developer Intern	January 2026 - June 2026
- Developed and maintained responsive, production-ready web interfaces for enterprise clients using Next.js, Nuxt.js, and TypeScript. - Translated complex UI/UX designs into functional code, ensuring pixel-perfect implementation and cross-device compatibility. - Collaborated closely with backend engineers and project leads to integrate RESTful APIs and ensure seamless data synchronization. - Participated in code reviews and applied clean code habits to ensure maintainability and optimal rendering performance.	

Fakultas Ilmu Komputer (FILKOM) UB	Malang, East Java
Laboratory Assistant	September 2025 - June 2026
- Mentored 80+ students on Modern Web Development (Laravel/PHP), Integration, and Algorithms (Java), focusing on debugging strategies and Git workflow fundamentals. - Conducted weekly code reviews, providing technical feedback to improve students' code structure, readability, and logic implementation. - Assisted in troubleshooting environment setup and error handling during practical sessions.	

Organizational Experiences

MGM Laboratory, FILKOM UB	Malang, East Java
R&D Mobile Staff	April 2026 - Present
- Conducted research and development on modern mobile application frameworks, focusing on UI performance and architecture best practices. - Collaborated with laboratory members to prototype mobile solutions and evaluate new technologies for software development.	

Project Experiences

Corporate Banking Web Portal (Internship Project)	2026
Front-End Developer	
- Engineered a fully dynamic, Server-Driven UI architecture using Nuxt.js and Sitecore JSS, where page layouts and content are dynamically rendered based on backend API payloads. - Developed modular and highly reusable UI components to populate headless CMS pages, ensuring flexibility for fully dynamic data structures provided by the backend. - Conducted rigorous UI slicing to ensure cross-browser compatibility and seamless mobile-responsive adaptations.	
SlotReality - Interactive Simulation Web	2025
Front-End Developer	
Won 2nd Place at ITECHNO CUP 2025 (Best Front-End Implementation).	

- Optimized rendering performance for heavy animations by leveraging GSAP GPU-accelerated animations to deliver fluid and jank-free interactions.
- Implemented high-fidelity responsive designs using Tailwind CSS, ensuring pixel-perfect adaptation across diverse mobile viewports.

Qnectify - AI EdTech Platform

Front-End Developer

2025

- Honorable Mention at HOLOGY 8.0 for Software Innovation.
- Built a gamified learning interface consuming RESTful APIs (Gemini), implementing strict error handling and loading states.
- Improved SEO and initial load performance by implementing Server-Side Rendering (SSR) in Next.js for dynamic quiz content.

PrediAI - Medical System

Mobile Developer

2025

- Top 20 Finalist GEMASTIK XVIII (Selected from 376 teams).
- Architected a scalable Android codebase using Clean Architecture (MVVM), strictly separating UI (Jetpack Compose) from business logic.
- Implemented asynchronous AI inference using Kotlin Coroutines to ensure smooth UI performance by offloading heavy computations from the main thread.

Other Projects:

- SENTINEL (Web3 Marketplace): Integrated Smart Contract interactions for warranty verification using Next.js.
- EasyGo (Map Platform): Developed complex filtering logic on Maps API to categorize locations based on user preferences.
- Capital Market Web Platform (Internship): Resolved critical API integration issues and UI bugs during the User Acceptance Testing (UAT) phase using Nuxt.js to ensure a stable production release.
- CalorEase (Health Platform): Engineered a real-time calorie tracking system using Next.js and Firebase, utilizing React Context API to manage global state without prop-drilling.

Achievements

Finalist Software Development - GEMASTIK XVIII (National ICT)	2025
2nd Place Front-End Development - ITECHNO CUP	2025
1st Honorable Mention Software Dev - HOLOGY 8.0	2025

Skills

- **Core Stack:** React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Nuxt.js, Vue.js, Kotlin.
- **Engineering:** REST API Integration, State Management (Context API/Hooks), Clean Architecture, SSR, Component Reusability.
- **Tools & Performance:** Git/GitHub/GitLab, Docker, Firebase, Figma, Postman.
- **Soft Skills:** Mentoring, Cross-functional Collaboration, Adaptability, Attention to Detail.
- **Languages:** Indonesian (Native), English (Intermediate).
